

## Tips for renting equipment

\* Call One Stop Rental and describe the project you would like to complete with rented equipment. When we know the details of your project, we can recommend exactly the type and size of equipment you'll need for most lawn and garden and home improvement or repair projects. We also will help you organize the additional supplies you'll need to complete the job correctly. We carry many of the extras, such as sandpaper or detergent for example, to do a professional job.

\* Before you actually come in, organize the work area so you can use the equipment right away when you bring it home. For example, if you're shampooing a carpet, remove furniture from the room before you pick up the shampooer. This preparation can save you money because you are charged for the time the equipment is in your possession - not for the time you actually spend using it.

\* When you pick up the equipment, we will explain how to use it safely and correctly. If you don't understand the instructions or feel uncomfortable about operating the equipment, ask for more information.

\* Make sure you understand the rates, store hours and policy for returns. We will go over this in detail as you check out the equipment. You can also visit our FAQ's section of our website for more information.

\* Make sure you understand your responsibility for the equipment. Generally, the rental store is responsible for equipment maintenance and will replace equipment that breaks down during normal use. But when damage occurs because of a customer's negligence or misuse, he or she is responsible for repair or replacement. For expensive equipment in your possession, construction equipment and tents are examples, you may need to provide on-site security or purchase temporary insurance.
